Art Unit: 2454

**Art Rejections:**

1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

2. This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).

3. Claims 1-34 are rejected under 35 U.S.C. 103(a) as being unpatentable over Koch, U.S. pat. No. 6,671,264.

Koch discloses a method for identifying unending transactions comprising:

- a) monitoring an interface for a packet (see col 3, lines 29-30);
- b) determining whether a transaction has timed out (see col 3, lines 30-32); and

Art Unit: 2454

c) flagging the packet if it is determined that the transaction has timed out (see col 3, lines 32-35).

Koch does not explicitly teach flagging the timed out transaction.

It would have been obvious to one of ordinary skill in the art at the time the invention was made to recognize such flagging or any equivalent notifying mechanism because it would have enabled the system to identify/block the stale packet (see col 3, lines 32-35).

Per claim 2, it is noted that Koch's teachings comprise P2P network (see col 1, lines 13-33).

Per claims 4-5, Koch teaches labeling a transaction ID the packet to identify a pending active transaction (see col 3, lines 13-28).

Per claim 3, Koch does not teach applying the invention in a simulation application. It would have been obvious to one of ordinary skill in the art at the time the invention was made to apply Koch's teachings in real data networks as well as simulated applications.

Per claims 6-7, Koch does not teach generating debug information. It would have been further obvious to one skilled in the art to generate and utilize such debug data in Koch

Art Unit: 2454

because such debug data would be essential in many applications especially simulation applications.

Per claims 8-9, Koch teaches forwarding the packet to the receiving unit and removing a complete transaction from the pending list (see col 4, lines 5-15).

Claims 10-29 are similar in scope as that of claims 1-9.

Per claims 30-39, an official notice is taken that the use of data translator/converter for convert data formats is well known in the art. It would have been obvious to one skilled in the art to utilize appropriate data format converter for a specific simulation application.
